2.4 GHZ   Desktop Combo Kit

QUICK REFERENCE

Product

NANO RECEIVER   MOUSE   KEYBOARD

Get Ready

1. Before using the Keyboard and Mouse, please make sure your batteries are fully charged or that you are using fresh alkaline batteries
2. Install 1 * AA battery into the keyboard.
3. Install 2*AAA batteries into the mouse.

Cautions

Please make sure to insert the batteries properly according to the +/- markings to avoid damaging the Keyboard and Mouse

How to Start

1. Connect the nano receiver to the USB port on the computer.
2. Bring the wireless keyboard and mouse within 10 meter of the nano receiver with clear line-of-sight (i.e. no obstructions)
3. Give the desktop kit a few seconds, and it should connect to the nano receiver.
4. If this does not work, replace the batteries with a fresh set and try again. Also note that non-brand name batteries are not recommended for use with our equipment, as they may not supply enough energy for performance

Notice

To avoid environmental interference, which will reduce the effective distance, it should be noted below for the mouse and receiver.

1. Do NOT put the mouse and receiver on metal cabinet or metal desk It is better not having metal or interference source around, which may affect the RF communication, and reduce the communication distance.
2. The ideal for the mouse and receiver is having 15-20 cm distance from computers or in any open place.
3. If the link & low battery light is illuminated,please replace batteries with a new set.
